

OFFICE OF COURT ADMINISTRATION Court Activity Reporting and Directory System XML File Specification – Justice Courts

The XML file specifications for the Justice Court report are detailed below. Sample contents are included within the XML tag, and explanatory information is shown outside each set of brackets <> as applicable. The sample contents of the fields in this document do not create an in-balance report when loaded. The numbers in this example are merely examples.

Reports submitted with a REPORTINGMONTH and REPORTINGYEAR of September, 2013 and beyond must conform to the **oca-JP-schema-v2** schema. The XML file must use new tag names in the Civil section, as demonstrated in this document, and the **xmlns** attribute of the ROOT node must specify **xmlns="urn:oca-JP-schema-v2"**.

File Description: The file is broken down into Record Header, Number of Reported Lines and Line Details.

Record Header information relates to the header of the data reported to uniquely identify the submitted file and will be committed to Records Header Table in the database.

NumofLinesReported will identify total lines reported on this xml file.

LineDetails identifies the actual data conveyed through this file transfer. The descriptive information relates the line details and data elements to the actual report completed either on paper or on line.

The CORRECTEDFLAG, CORRECTEDDATE, AND CORRECTED BY tags apply to xml files that will be used to correct/replace a previously submitted report. If an original report is being submitted, these fields should have the **xsi:nil="true"** attribute and will be blank. If the file will replace an already existing report, these fields will have values as indicated below.
